# 期末 Project

# 110學年度第1學期

老師:朱守禮 老師 資訊二乙 第 32 組 蒲品憶 10927207 吳凱鈺 10927234 姜美羚 10927256

# 一、程式說明

1.Name:印出組員語組別名單

2.Id:輸入學號,計算學號總和,印出組員學號及學號總和。

3.JuliaSet: 使用暫存器存放變數,利用迴圈不斷透過各個指令來計算 pixel 存至陣列中,繪製一個個碎形圖案,因迴圈不斷變化使圖像也不斷變化,形成動畫。

4.Main: 結合前三個函數的功能,除了各函數原本的功能外,最後印出組別、 全組員之學號和姓名,以及總和。

### 二、設計重點說明

結合 minterm project,並改寫 juliaSet.c 為 juliaSet.s,最後用 main.c 結合在一起。

#### 1. 定址模式:

(1) ldr	r0,	[r0], #2	@id.s load r0 with word at the
			@adress in r0 then $r0 = r0 + 2$
(2) ldr	r2,	[r0], r3	@id.s load r2 with word at the
			@adress in r0 then $r2 = r0 + r3$
(3) ldr	r0,	[r0]	@id.s load r0 with word at the
			@adress in r0
(4) str	r0,	[r1, #0]	@id.s store r0 with word at the
			@adress in $r1 + 0$

#### 2. Condition execution

(1) mov**hs** r3, sp @name.s if (hs) r3 = spr0, =msg5 @id.s if (eq) r0 = address of msg5(2) ldreq (3) add**vc** r1, r1, r2 @id.s if (vc) r1 = r1 + r2(4) add**pl** r0, r0, r1 @id.s if (pl) r0 = r0 + r1r0, r1, r2, lsl #0 @drawJuliaSet.s if (vs) r0 = r1 + r2(5) addvs (6) subne r0, r1, r2, lsr r1 @drawJuliaSet.s @if (ne) r0 = r1 - r2 >> r1(7) suble r0, r1, #0 @drawJuliaSet.s if (le) r0 = r1 - 0

### 3. Operand2

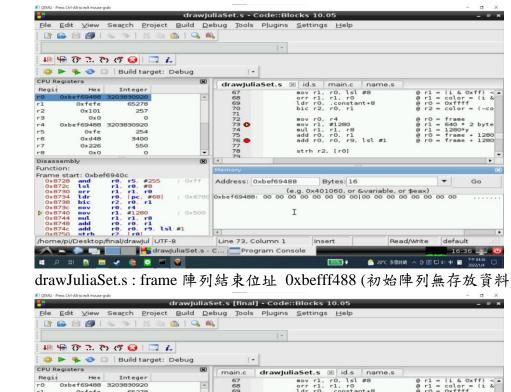

(1) add**vc** r1, r1, r2 @id.s if (vc) r1 = r1 + r2(2) add r0, r1, r2, @name.s r0 = r1 + r2 右旋 0 lsl #0 r0, r1, r2, @name.s r0 = r1 - r2 右移 r1(3) sub lsr r1 @name.s r0 = r1 - 0(4) sub r0, r1, #0 @drawJuliaSet.s if (vs) r0 = r1 + r2(5) addvs r0, r1, r2, lsl #0 r0, r1, r2, lsr r1 (6) subne @drawJuliaSet.s @if (ne) r0 = r1 - r2 >> r1@drawJuliaSet.s if (le) r0 = r1 - 0(7) suble r0, r1, #0

4.

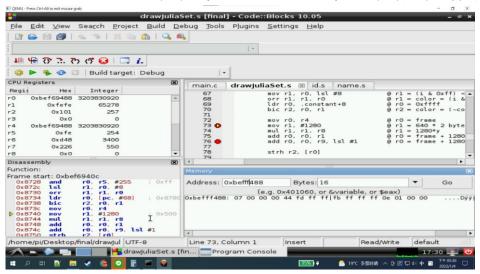

### 三、結果

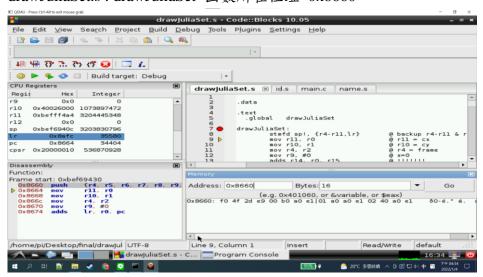

drawJuliaSet.s: frame 陣列起始位址 0xbef69488 (初始陣列無存放資料)

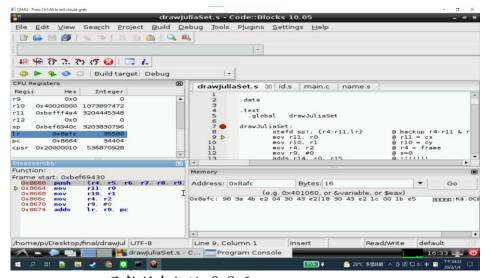

drawJuliaSet.s: frame 陣列結束位址 0xbefff488 (初始陣列無存放資料)

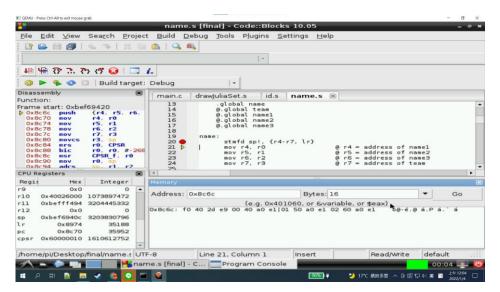

drawJuliaSet.s: drawJuliaSet 函數所在位址 0x8660

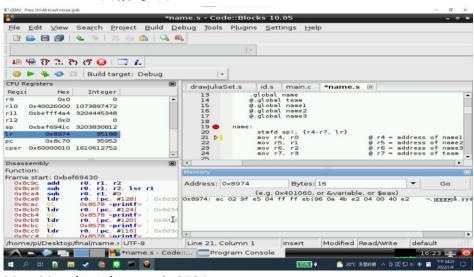

drawJuliaSet.s: drawJuliaSet 函數返回位址 0x8afc

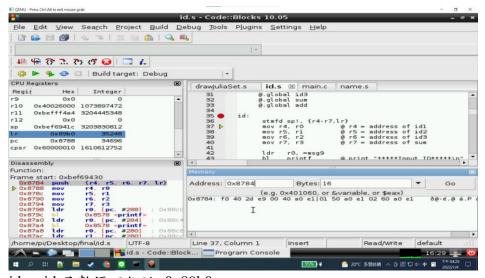

name.s: name 函數所在位址 0x8c6c

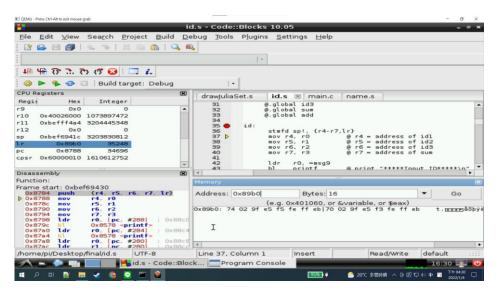

name.s: name 函數返回位址 0x8974

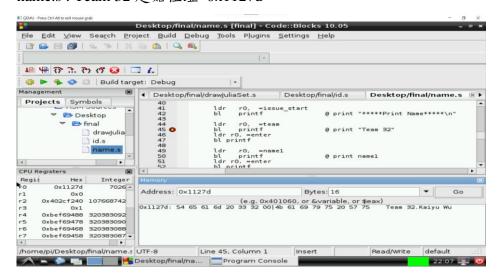

id.s: id 函數所在位址 0x8784

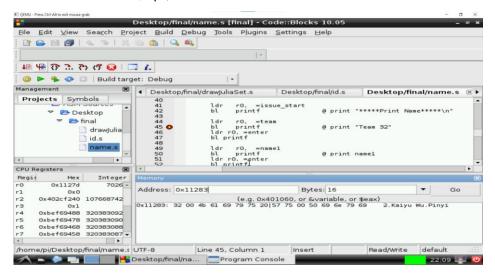

id.s: id 函數返回位址 0x89b0

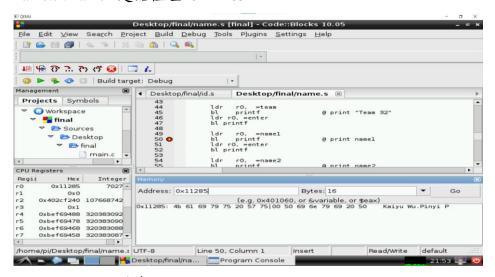

name.s: Team 32 起始位址 0x1127d

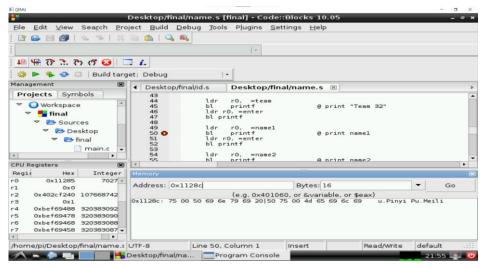

name.s: Team 32 結束位址 0x11283

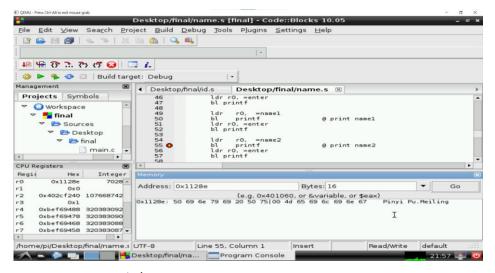

name.s: name1 起始位址 0x11285

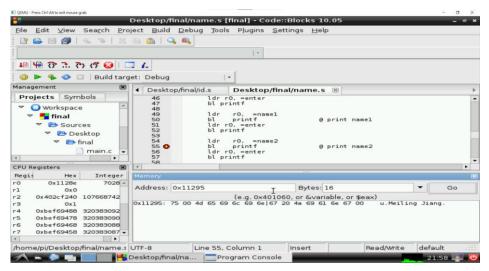

name.s: namel 結束位址 0x1128c

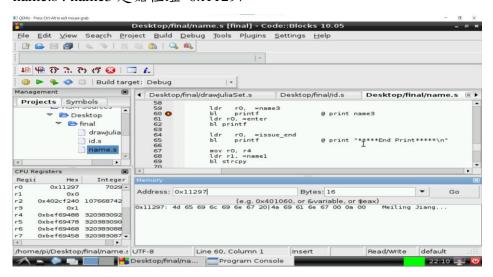

name.s: name2 起始位址 0x1128e

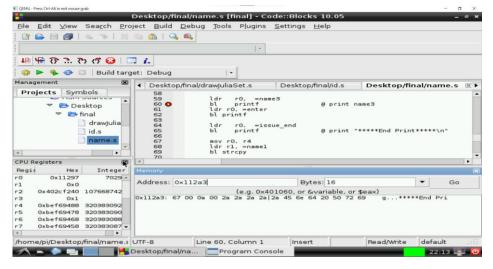

name.s: name2 結束位址 0x1195

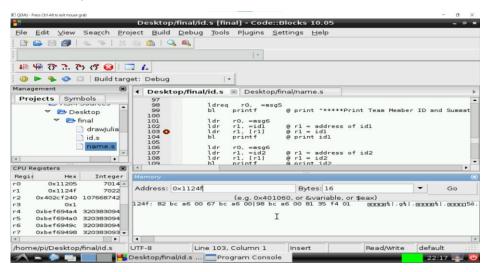

name.s: name3 起始位址 0x11297

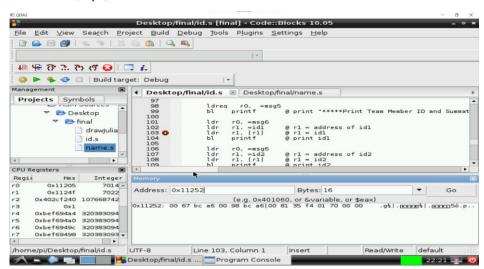

name.s: name3 結束位址 0x112a3

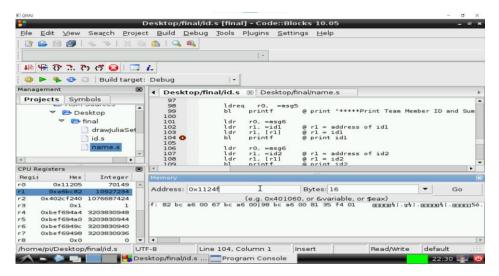

id.s:id1 起始位址 0x1124f

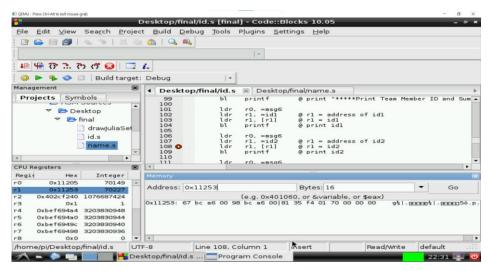

id.s:id1 結束位址 0x11252

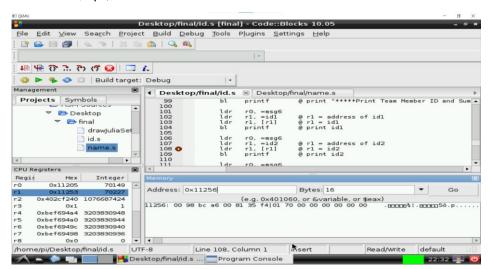

id.s: id1 驗證位址 0x1124f

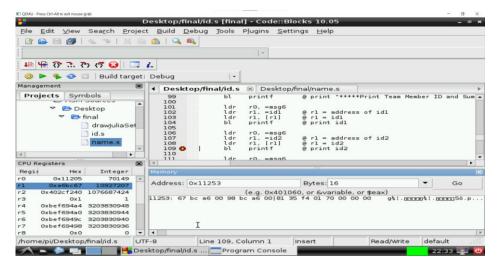

id.s:id2 起始位址 0x11253

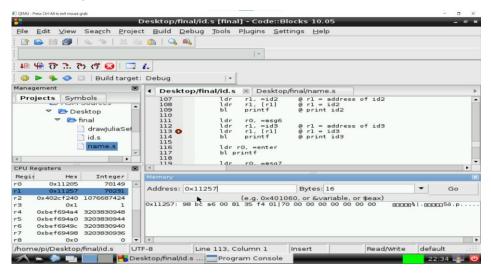

id.s:id2 結束位址 0x11256

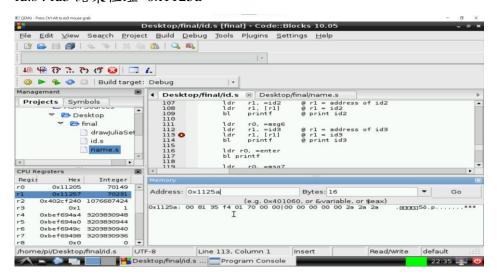

id.s:id2 驗證位址 0x11253

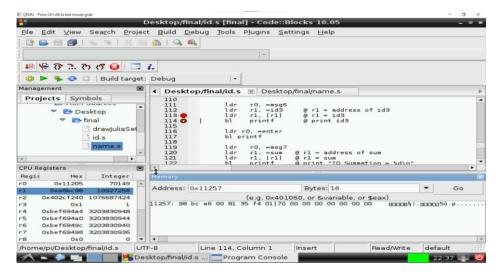

id.s:id3 起始位址 0x11257

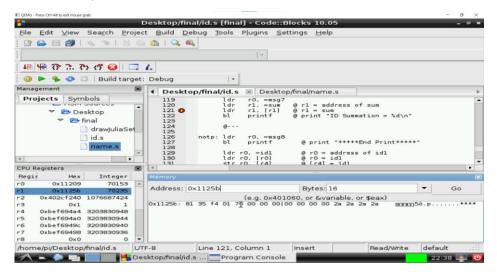

id.s:id3 結束位址 0x1125a

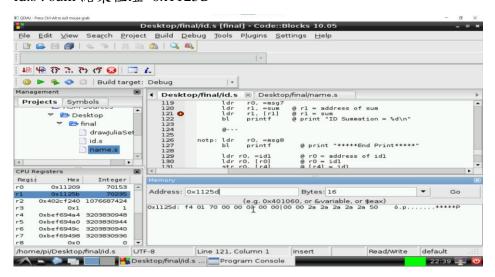

id.s:id3 驗證位址 0x1157

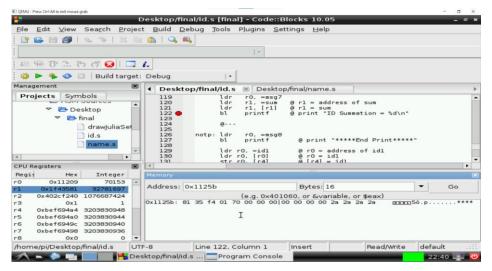

id.s: sum 起始位址 0x1125b

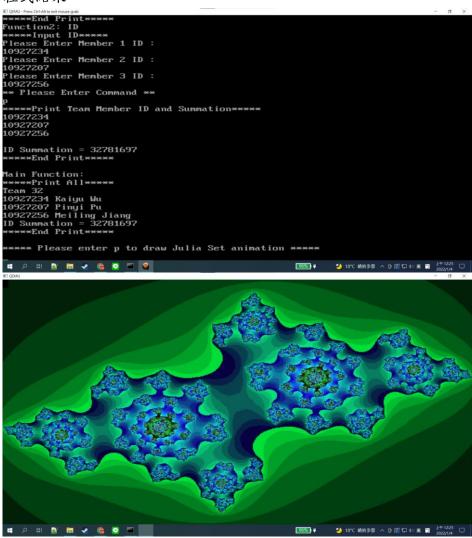

id.s: sum 結束位址 0x1125d

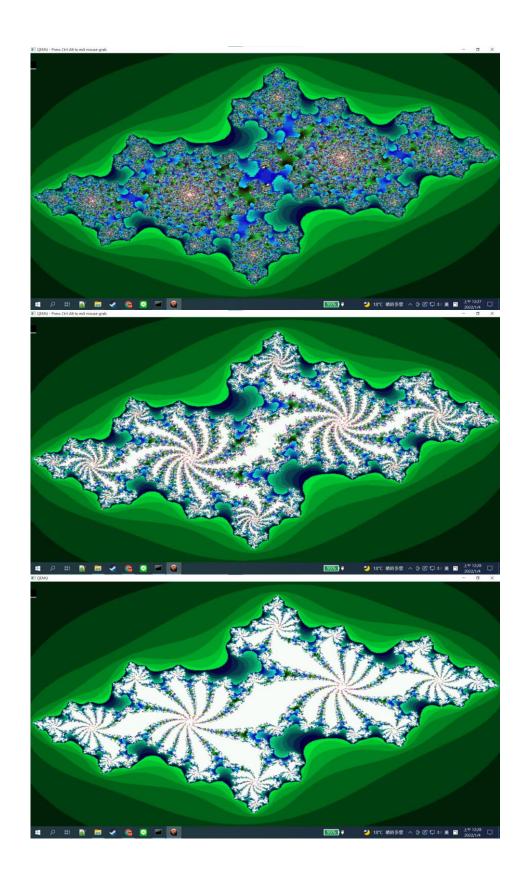

id.s: sum 驗證位址 0x1125b

### 程式結果

# 四、感想

這次作業比 minterm 更加有挑戰性,因為要把 c 語言和 ARM 結合在一起,還要翻譯 drawJuliaSet.c 翻譯成 drawJuliaSet.s,其中有三個迴圈,一個包著一個,十分複雜,還有因為 main 是改為用 c 語言寫,所以在傳變數進 function 的時候費盡了心思。由於這次變數很多,使用的暫存器也多,所以要事先規劃好暫存器位置給變數,並要記得,小心不要改變到變數,不然很難 debug,感覺這次成長了很多。

### 五、分工

程式碼: 姜美羚

報告 : 蒲品憶、吳凱鈺
